Please make sure your Church or Chapel allows videography.
Please allow up to 10 days for your wedding video

What really makes a great video?

What makes a great video is ultimately the editing!

This is known as Post Production.

*We offer 3 choices of editing: **Basic**, **Standard** and **Enhanced**.*

***Enhanced** editing creates a feel of watching a movie.*

It's not just about shooting the video. Most of the work that goes into creating a special DVD is the editing

choices you choose. You may also choose between

Documentary Style or Cinematic Style!

Editing can be very time consuming.

To make a spectacular DVD you can figure one hour of editing per minute of footage. That means a typical

1/2 hour show will take about 30 hours to edit. Sometimes clients will say they only need 4 hours of shooting but the real question is do you want us to just turn over the raw footage or

*do you want it edited? What do you want the end result to look like?
You can always opt to upgrade the editing choices so when
deciding on a package think about what you want your video to
look like when it's done!*

Editing Styles:

Basic Editing: Cuts only, no slow-motion or black and white etc.

Standard Editing: 10-15 hours of editing. Includes slow motion and other effects when needed.

Enhanced Editing: 20-40 hours of editing. Includes slow motion and other effects when needed plus 2 hours of customer supervised editing.

One camera view vs Two camera view:

We cannot stress the importance of having more than one camera video taping at the same time. If only one camera is used many things can happen that cannot be fixed.

1. People will walk in front of the camera even your hired photographers do all the time! (with 2 cameras we can switch footage to the second camera)

2. People sometimes accidentally kick the tripod (with 2 cameras, we switch to second camera during the jiggling scene)

3. Zooming in and out has to be used too much (this results in amateur looking video)

4. Can't get both close ups and pan viewing (one camera can't be shooting everything at once)

5. Audio drop outs cannot be fixed (audio from second camera can be patched in)

6. If tape has to be changed you will lose footage (no footage can be shot while tape is being changed)

7. Since there is no "do over" anything that goes wrong could be a disaster. Ah... the dreaded Murphy's Law!

Don't risk this. Especially for a wedding ceremony! It's always nice to have footage from the back and footage facing bride & groom. If your budget is tight, think of other things to do without, but not your video because years from now this will be your most treasured memory.
